SPENDING TRACKED. BUSINESS GROWN.

Private-pilot client guide - V1.0.0 - documented source 78dbb0c37991b1dbf23706bc906687eb6b24b574

Private-pilot boundary. Capture Tracker organizes recorded financial facts. It is not a CPA and does not file taxes, send payments, run payroll, invoice, manage inventory, or offer public signup. Uploaded PDF, JPEG, and PNG files remain private and are security-scanned before they become available.

Start here

Use the private workspace URL supplied by the owner and sign in with your existing email and password. Create account is intentionally unavailable after the one-time workspace setup; contact the workspace owner for access help. There is no self-service password reset today. Sign out on shared devices.

Navigation

Desktop navigation lists Today, Money, Documents, Reports, Taxes, Weekly Review, Reconciliation, Ask AI, Activity, and Settings. On phones, the primary bar is Today, Money, Documents, Reports, and More; More contains the remaining workflows.

Today

Today is a read-only decision briefing for available business cash, tax-planning signals, current-period income and expenses, review work, document attention, Weekly Review, and recent activity. Follow its links to the underlying workflow; Today never changes accounting.

Money

Use Money to enter, classify, search, and review transactions. A saved transaction creates a posted balanced journal entry. Correct mistakes with the supported correction, reversal, or replacement workflow rather than erasing history. Mixed activity requires deliberate splits.

Documents

Upload PDF, JPEG, or PNG up to 10 MiB. Mobile Take photo uses the rear camera where supported; camera photos are normalized on-device before upload, while PDFs are unchanged. After upload, a document remains private during Security scan pending and refreshes automatically to Ready, rejected, or a safe scan-failure message. Only Ready documents can be opened, linked, extracted, matched, or used as evidence. Removal is available only where no protected accounting relationship exists and revokes access immediately.

Reports

Profit and Loss, Balance Sheet, Trial Balance, and Cash Activity use complete database-backed accounting totals. Supporting detail can paginate without making totals partial. A CSV export may safely refuse a large request rather than return partial output.

Taxes, Weekly Review, and Reconciliation

Taxes presents planning facts only and does not file returns, send payments, run payroll, or replace a CPA. Weekly Review records acknowledgement without hiding unresolved work. Reconciliation compares statement and book balances and finalizes only at an exact \$0.00 difference; matching never creates another transaction.

Ask AI, Activity, and Settings

Ask AI is read-only and intentionally unavailable for real-data production answers until a separately approved provider exists. Activity is the business-scoped history of material actions. Settings supports default report period, Weekly Review day, and document-retention target; changes appear in Activity.

Receipt workflow

Documents -> Take photo -> permit camera -> review preview -> upload -> wait for Security scan pending to refresh to Ready -> Open or link to the transaction. If a scan remains pending unusually long, contact the workspace owner. Do not treat pending, failed, or rejected files as usable.

Mobile and safety

Use Safari Share -> Add to Home Screen or Chrome menu -> Add to Home screen for a browser shortcut. Confirm the production URL before entering business data; staging and local demo are fictional-only. Allow camera permission only when photographing receipts.

Security and privacy

The workspace is private and authenticated. Data and documents are business-scoped. New documents are privately quarantined and ClamAV-scanned before ACTIVE + CLEAN-only protected access; signed document access rechecks current state. Accounting history is preserved through corrections and reversals. Operational backups are encrypted.

Screenshot provenance

All local-demo images are genuine captures from the repository local fictional demo. Public-production images are unauthenticated public pages only.
