

Quick Start

SPENDING TRACKED. BUSINESS GROWN. - Private pilot - V1.0.0

1. Open the private workspace URL supplied by the owner and sign in.
2. Read Today for available business cash, review items, documents, and tax-planning signals.
3. In Money, add the first business transaction and classify it carefully.
4. In Documents, take a receipt photo or upload a PDF/JPEG/PNG (10 MiB maximum). Wait for the private security scan to refresh to Ready, then review and link it.
5. Use Reports to read complete totals; supporting detail can paginate without reducing totals.
6. Run Weekly Review each week and resolve linked work before marking the review complete.
7. On a phone, use Today, Money, Documents, Reports and More for Taxes, Weekly Review, Reconciliation, Ask AI, Activity, and Settings.

Money records financial activity; Documents stores evidence; Reports summarizes complete accounting results. Taxes is planning only. Ask AI is read-only and unavailable in real-data production until an approved provider exists.

Document security. Uploaded files remain private and are security-scanned before they can be opened or used as evidence. A pending, failed, or rejected scan is not usable. Capture Tracker is not a CPA and does not file taxes, submit payments, run payroll, invoice, or provide public signup.

For access problems, contact the workspace owner. In a completed private workspace, Create account will not appear and there is no self-service password reset.
